SKILLS

Robotics & Automation

- Robot Operating System (ROS)
- Computer vision applied to 3D reconstruction
- Industrial robot programming with VAL3 (Staubli)
- Sensor integration (IMU, LiDAR, caméra)

Programming & Embedded Systems

- Python, C/C++
- Arduino embedded development
- Linux / Shell
- Sensor data processing and exploitation
- PCB design using KiCad

CAD & Mechanical Design

- 3D design and modelling with a creative, solution-oriented approach
- Mechanical integration of systems: chassis, mounts, components

LANGUAGES

- Arabic (Native)
- French (C1)
- English (C1)
- Spanish (B1)
- German (A1)

CERTIFICATIONS

TOEIC® Listening and Reading test
02-2025

DELE (Diploma de español como lengua extranjera)
06-2021

PROFILE

Fourth-year engineering student at Polytech Dijon, specializing in Robotics and Instrumentation. Currently completing an industry internship, with experience in embedded systems development and the design of technical solutions for real-world projects. Comfortable working on challenges combining mechanical design and software development, I am looking for a 6-month internship starting in April in the fields of robotics, embedded systems, or automation.

EDUCATION

Engineering Degree in Robotics & Instrumentation 09-2022 - PRESENT
Polytech Dijon | Université de Bourgogne Dijon, France

French General Baccalaureate Obtained in 06-2022
Lycée français de Koweït (LFK) Salmiya, Koweït
Graduated with highest honors (Mention Très Bien)

EXPERIENCE

Product Development Engineering Intern — Mechanical & Software 04-2026 - 08-2026
Septentrio NV - Leuven, Belgium

- Contributed to the development and finalization of GNSS products in an industrial environment.
- Designed and optimized mechanical enclosures for products using SOLIDWORKS and FreeCAD, while integrating mechanical and industrial constraints.
- Used a recent GNSS product from the company to design a Raspberry Pi-based solution dedicated to robotics applications.
- Proposed concrete and relevant technical solutions, taking into account market constraints and competitor approaches.
- Collaborated with engineering teams through regular technical discussions and structured project progress follow-up.

ImViA Mobile Robotics Intern 06-2025 - 07-2025
ImViA Laboratory — University of Burgundy

Integrated, visualized SLAM data, and planned navigation on a Clearpath Jackal mobile robot.

- Developed practical skills in ROS and SLAM tools, including RTAB-Map and RViz.
- Independently planned a navigation protocol for the exploration and complete mapping of a laboratory over a one-month period.

TECHNICAL PROJECTS & COMPETITIONS

FANUC | Preliminary Project — FANUC Olympiad 2026 09-2025 - 01-2026
Design of a robotic cell compliant with the provided specifications, intended for the automated handling and transfer of jars.

- Designed a robotic cell using Fusion 360 and ROBOGUIDE for the handling and transfer of jars in an automated environment.
- Studied and selected suitable solutions based on industrial and production constraints.

INNOVATEAM | AWAKE Challenge (2025) Completed in 06-2025
Puteaux, France

Collaboratively developed a 1/10-scale autonomous mini-vehicle for a national competition.

- Ranked 4th nationally among 12 major engineering schools.
- Performed an electrical analysis of the system power supply, including motors and control board, to ensure reliability and safety.
- Designed the chassis, bodywork, and component mounts using Fusion 360.
